Projects

ZAZA-UP: Winner project of Hackathon Zah@Geek organized by Orange Digital Center
An application that aims to make IT helpful for children in every aspects possible

Front-End Developer / Integrator

January 2023

- Design the front-end part using **AngularJS**
- Integrate the data retrieved from different APIs
- The UI was so attractive that the team was amazed (they wanted to use the application even though it was not yet operational) regardless it was intended for children
- We were **first**

PROJECT STOCK: WebApp that aims to facilitate stock logistics on small-scale

Front-End Developer / Integrator

January 2022

- Design the front-end part using **Flask** (Python Web Framework) and **JavaScript**
- Manage the relationship between the Front-end and the Back-end like the data-transfer
- The UI/UX was so simple that after login, it only takes 3-4 steps to make any action

Project Designer

January 2022

- Design the database and functionalities using **Merise Method**
- The project where so well-designed that the development and implementation were finished in two days
- The project was made in four days
